SQL Server Certified Master

The first MCM in Utah. Has been working with SQL Server since 4.2, even on O/S2.

Microsoft Data Platform MVP

Awardee since 2009 for SQL Server. Contributes to Experts-Exchange and SQLServerCentral forums. Speaker at many SQL Saturdays around the country. I have led local PASS Chapters as well as founded the Virtual PowerShell Group.

PowerShell DBA

I have always loved automation and have used PowerShell since v1.0 I have spent many years using SMO and love to automate anything that I can to get the computer to do my work. I even wrote a chapter for the PowerShell Deep Dives book. On the Quest to become a PowerShell DBA.

Agenda

- Introduction to PowerShell
- EcoSystem
- Versions of PowerShell
- Let's See Some PowerShell

Intro to PowerShell

- Verb-Noun is the command format (Get-Verb)
- \$var instead of @var int
 - PowerShell infers the data type when assigned and is dynamic which means that the variable does not need to be declared
- Case Insensitive
- \$Profile and Start-Transcript
- String manipulation in PowerShell (single)' or (double)"

Syntax

- **Commenting in PowerShell**
 - `--` is a single line comment in SQL Server
 - `#` is the single line comment in PowerShell
 - `/* */` is the multi-line comment in SQL Server
 - `<# #>` is the multi-line comment in PowerShell

Aliases

Select is an Alias for Select-Object

- Query objects for certain properties to output
- Sort is an Alias for Sort-Object
- Allows sorting of a collection of objects by properties
- Dynamic ones are accomplished by using HashTables @{ }

Ecosystem of PowerShell

- Console vs. IDE
- ExecutionPolicy of user or Computer
 - RemoteSigned is the normal one to use
- Windows 2016 / Windows 10+
- TLS 1.2 as the default protocol
 - `[System.Net.ServicePointManager]::SecurityProtocol = [System.Net.SecurityProtocolType]::Tls12;`
- .NET is at the core of PowerShell (core or Framework)

EcoSystem of PowerShell

- Modules – PowerShell Gallery
 - Set-PsRepository
- SMO – Programmatically using objects to manage SQL Server
- `$env:PSModulePath` is the governor of what PowerShell sees for modules

Versions of PowerShell

- WinRM 5.1 (Windows Remote Management)
 - Windows 10, 11, Server 2016, 2019, 2022
 - Windows Only
- PowerShell 7.x (cross-platform)
 - Windows or Linux
 - Uses .NET and not .NET Framework so some things may not be present like they are in Windows

PowerShell Demo

Let's See Some PowerShell

Ben Miller & Associates, Inc.

Review

- PowerShell is a great tool for DBAs
- Modules make the magic happen
- SMO is at the heart of all things DBA in PowerShell
- Practice is SUPER important to master this tool
- Do NOT give up. Keep at it and it will become your best tool
